VOLUME CONTENTS

Volume 9, Number 1/2

COLUMBUS IV: Proceedings of the Fourth Columbus Symposium

Gottfried Greger v Preface

Opening Addresses
Gottfried Greger 1

L. Saporito 3 Intervento del sottosegretario on. Le Learco Saporito al *IV Symposium Columbus*

Opening Lecture
H. H. Koelle 5 Orbital operations in perspective

THE INTERNATIONAL SPACE STATION

F. Engström and **G. Altmann** 11 Columbus—present status

USERS OF COLUMBUS

H. Olthof 21 Space science with Columbus—3

N. de Villiers 23 Earth observation from the polar platform—a new era

Paul Clancy 29 Materials science research potential in Columbus

R. Monti 33 Fluid science experiments and facilities

Marianne Cogoli and **Augusto Cogoli** 41 Research on Biolab, a multi-user facility for APM

Flemming Bonde-Petersen 47 Human physiology laboratory on Columbus

MAN IN SPACE

U. Merbold and **H. Walpot** 51 Workshop 3A: Man in space

V. Hanssen 55 Flight control—scientist/user interface

D. E. Mullinger 59 The involvement of astronauts in payload design

F. Rossitto 61 Man in space

UTILIZATION MANAGEMENT

R. Jönsson and **G. Naja** 63 Workshop 3B: Utilization management. Summary and conclusions

R. Jönsson — 65 — The concept of mission implementation organization of Columbus utilization

A. Passerone and F. Rossitto — 67 — User support infrastructure in Italy

PREPARATION OF UTILIZATION

Gottfried Greger — 69 — German approach to use Columbus

H. E. W. Hoffmann, H. J. Sprenger and F. Unz — 83 — User oriented approach for efficient utilization: requirements for the preparatory phase

F. di Tolle and F. Longoni — 87 — Manned systems and supporting technologies: crew workstation, telescience and EGSE

R. A. Henderson and S. Press — 97 — User documentation evolution, planning and implementation for Columbus missions

Ph. Delbey, Ph. Pitard and X. Laborde — 105 — Columbus data management system

A. Bassini, S. Musazzi, U. Perini and M. Giglio — 109 — Optical diagnostic tools for a microgravity fluid science laboratory

Ernesto Vallerani, Luigi D'Emiliano, Luciano Basile and Gualtiero Brambati — 115 — Columbus Pressurized Modules toward European manned space infrastructure

Wolfram Lork, Paul Clancy and Isabelle Duvaux-Béchon — 131 — Characteristic features of microgravity payloads for the man-tended free-flyer

K. L. Müller and W. Wyborny — 139 — Payloads operations control with users in remote locations: Spacelab missions and beyond

G. T. Biddis, K. Wedde-Mühlhausen and K. D. Schmidt — 143 — Operational design criteria for a user home base under the Columbus scenario

G. Lippner, K. Wessenberg and F. Urban — 149 — Objectives and requirements for supporting a Columbus element

G. Viriglio, S. Lioy and L. Battocchio — 157 — Columbus APM centre as a node of the European ground segment

G. Naja — 163 — Columbus utilization cost studies

K. Lohmann, S. Holl and H. Sprenger — 167 — Some aspects of LCC reduction for in-orbit experiments

A. del Bufalo and A. Falciai — 175 — Definition of a support environment for design, development and integration for payload users within the IOI

G. Kampfer, O. Afacan and W. Schröder — 181 — Optimization of Columbus composite payload resources utilization by trading alternative realizations of facility functions

INTERNATIONAL COOPERATION

J. Reifarth — 185 Legal framework of the International Space Station cooperation

H. Ersfeld — 189 Handling and control of transatlantic data transfer during Phase C/D

I Appendix A—Scientific Programme

IV Appendix B—List of Participants and their organizations

Volume 9, Number 3

Bernd Abt — 195 Deployable precision reflectors

Paul Bialla and Mark Henley — 201 The space-based OTV and the establishment of the next launch site

M. S. Lavitola, V. Guarnieri and R. Monti — 209 The microgravity data bank for scientific and industrial communities

G. P. Wilson — 221 HOTOL: aerospaceplane for Europe

H. Ihara, S. Mohri and S. Kawai — 233 On dependable intelligent systems in space

N. Barberis and J. Dixson — 241 Geostationary Earth observations: platform operations from the Space Station

R. Srinivas and David Schaefer — 251 Multiple experiment processing furnace (MEPF): an overview

J. Simmons — 259 The Spacehab module as a microgravity research carrier

S. Ahmed, R. B. Gray, H. R. Warren and D. G. Fearn — 267 The new RADARSAT: an all-weather multipurpose Earth observation spacecraft

J. P. Schleinitz and R. E. Lo — 281 Solar–thermal OTVs in comparison with electrical and chemical propulsion systems

Denis J. P. Moura — 293 Technical benefits of existing space systems on future scientific missions: example of the VESTA Small Bodies mission

M. P. Gough and L. J. C. Woolliscroft — 305 Microprocessors in space instrumentation

Patrick Q. Collins — 315 Stages in the development of low Earth orbit tourism

i New Patents

Volume 9, Number 4

D. Bedini and **R. Pinotti**	325	Space Station habitation module: privacy and collective life. How interior architecture may organize this particular mutual relation and may identify new antistress activities
R. Backhaus, H. Sax and **K. Wanders**	333	Status and perspectives of vegetation monitoring by remote sensing
P. A. Hansson	339	A manned Phobos outpost
K. Matsumoto, M. Kusanagi and **T. Yamawaki**	343	Design evaluation and environment model for NASDA space operations and data system
M. Kawai, M. Tanaka, I. Ohtomo and **M. Nakamura**	357	Multibeam satellite communications system for fixed and mobile communications experiments
Pierre J. Madon	365	INTELSAT VII spacecraft
N. Sultan and **P. J. Wood**	375	Erlang re-use concept: figure of merit for frequency re-use applied to mobile satellite systems
Robert W. Brown	383	Space Station Freedom: a resource for aerospace educators
J. P. Pouliquen and **R. Tribes**	391	Inter Orbit Communication (IOC)
V. Bumba	399	Geophysical consequences of solar magnetic field global distribution and changes
T. Iwata	409	Technical strategies for lunar manufacturing
	i	New Patents
